1. Pick your pay cycle

- ☐ **Weekly**
- Paid every week. Plan 4–5 weeks per calendar month.
- ☐ **4-weekly**
- Paid every 28 days. Watch months with 5 weeks.
- ☐ **Monthly**
- Paid once a month (often last Fri / last working day).
- ☐ **Other**
- Shift / irregular — use the shortest reliable gap.

2. This payday — income in

UK tip

If you are paid 4-weekly, some calendar months have two paydays. Treat the second as buffer first — do not inflate envelopes until bills for that gap are covered.

Bills due before next payday

List every fixed cost that leaves the account between this payday and the next.

Order of attack

Pay housing, council tax, utilities, and minimum debt first. Streaming and gyms are optional — cut them before touching the buffer envelope.

Split leftover into envelopes

After bills: assign every pound. Unassigned cash gets spent by accident.
